

Roadside

ETC creates our roadside solutions to handle a number of challenges, including tolling facility support, lane equipment control, and cash management. We offer fully supported all electronic tolling (AET) solutions along with traditional and cash lanes. The RITE[®] Solution's roadside modules provide real-time data and automation, assisting with troubleshooting and manual maintenance. Our roadside solutions include the following elements:

- ◆ Lane Controller
- ◆ Facility Server
- ◆ Cash Management Technology
- ◆ Video Audit System

Express Lanes

Our express lane solutions ensure traffic flows smoothly, minimizing congestion on roadways while maximizing profits. Our dynamic pricing modules allow for the conversion of High Occupancy Vehicle (HOV) lanes to express lanes and allow single occupancy vehicles access in exchange for tolls which vary in price according to traffic volume. Our RITE[®] express lanes solutions include the following components and features:

- ◆ Dynamic Pricing Host (DPH)
- ◆ Trip Building
- ◆ Traffic and Revenue
- ◆ Dynamic Pricing Simulation
- ◆ Transponder and Image-Based Trips

Back Office

ETC's back office solutions includes account management, transaction processing, violation processing, accounting, reconciliation, interoperability, and reporting tailored to meet our customers' unique needs. To maximize efficiency, we use a combination of both manual and automated processes. Our RITE[®] back office solutions include the following features and capabilities:

- ◆ Account Management
- ◆ Maintenance Online Management System (MOMS)
- ◆ Image Capture and Review System (ICRS)
- ◆ Interoperability
- ◆ Reporting
- ◆ Reconciliation Module
- ◆ Treasury Module
- ◆ Host
- ◆ Accounting Module
